

Stop
and Smell the
Flowers

Redwoods do not survive alone

They grow so close to each other they merge at the base into one tree. The first thing they provide each other is strength and support with intertwining roots. Redwoods are like us. They find their strength in community.

COMMUNITREE

**Redwoods
do not
survive
alone**

They grow in clusters to reach higher than
the rest of their species into one tree. This
is strength, and we consider each tree is
more. Furthermore, one tree can't
survive without its community.
